

S2E and CYE, together for cutting-edge cybersecurity

Milan, 26 May 2022 – [S2E Solutions 2 Enterprises](#), a business technology consulting firm, announces a partnership agreement with CYE, a leader in cybersecurity optimisation solutions. CYE's technology, combined with S2E's professional services, creates a data-driven security model aligned with today's business needs and an effective solution for advanced organisations.

CYE's platform provides a comprehensive understanding of security based on attacks carried out by nationwide red teams. The platform analyses results and develops mitigation plans using S2E's real-time remediation and consulting services.

S2E CEO and Founder Cesare Moroni said: "This partnership sees us join forces for combined development in the market to offer unique value to Italian businesses. We will offer our customers risk analysis services for proactive threat assessment based on severity and potential impact on business objectives and corporate assets. Our experts will assist companies with mitigation and validation services within an integrated and comprehensive plan, defined based on facts, mathematical and quantitative data."

CYE CEO and Founder Rubi Aronashvili said: "We believe in strong local partnerships. Our technology in S2E's hands will provide broad coverage of professional services, provide organisations with the insights that will help them reduce short- and long-term exposure, optimise their investments and focus on what matters most."

CYE's advanced artificial intelligence-powered, cloud-based Hyver platform meets the most stringent international government security standards that help companies focus their efforts and resources on threats specific to their attack surface and critical assets. It provides the following benefits:

- Knowledge of the security state of apps, networks, vendors, and M&A by providing comprehensive organisational coverage.
- The latest security knowledge from the world's leading cyber experts.
- Optimised security investments using an affordable programme tailored to customer evolving security needs.
- A realistic risk assessment that enables the customer to prioritise remedies by correlating the value of assets, severity of vulnerabilities and information about those attacking businesses.
