

# Competence Center Infrastructure

[CCI]

Supports business evolution with an infrastructure that is up to the task

## Main benefits

Complex IT Infrastructure is no longer a challenge, with an experienced team

Our Infrastructure Competence Center is dedicated to the design, implementation and management of complex IT infrastructure, ensuring effective solutions with a focus on the issues of disaster recovery and high availability. With a proven track record in both on-premise and hybrid environments, we offer services tailored to meet the specific needs of each client, while ensuring optimal performance and enhanced system resilience. Our expertise covers a wide range of infrastructure expertise in the areas of network, perimeter and systems security, enabling us to address and solve the most complex challenges of the modern IT landscape.

## Scope

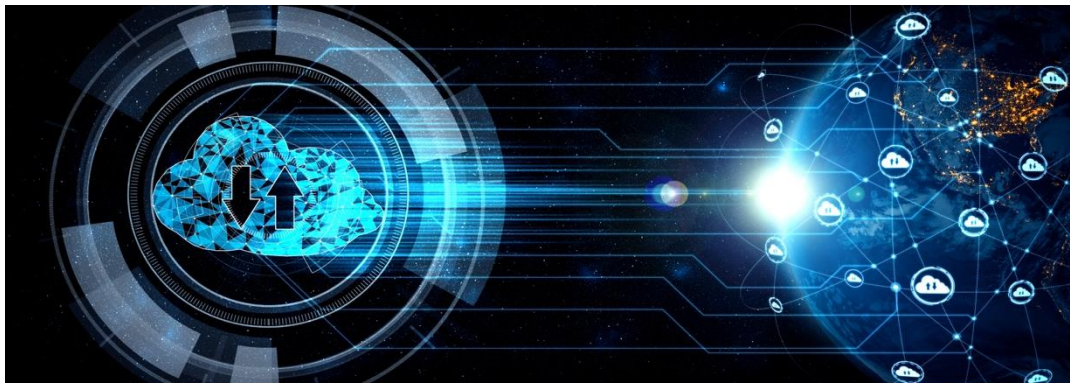

The offering is aimed at businesses of all sizes that need specialized support in the management of their IT infrastructure, on-premises and hybrids. Small businesses benefit from our ability to provide efficient and scalable solutions, while large organizations, often with infrastructures spread across multiple sites and in various jurisdictions, find in our service the answer to the needs of complex management and international coordination.

## Challenges facing companies

Companies are faced with challenges such as the managing infrastructure costs, the need to ensure business continuity and the increasing complexity of IT systems. These challenges can translate into operational inefficiencies, vulnerabilities of security and difficulties in maintaining agility business. Addressing these challenges in a way that is effective and sustainable over time requires a broad and diverse know-how, where experience can make a difference to the entire business continuity.

## The advantages offered

Our service offers significant benefits to several key business users. The IT manager benefits from a comprehensive team of experienced professionals capable of designing and implementing complex infrastructure suited to different situations. The CFO gains control and predictability over infrastructure costs optimized to marry costs with performance and service capabilities.

## S2E: approach and proposed methodology

Our Infrastructure Competence Center is distinguished by a team of highly qualified professionals who act with efficiency and precision, strengthened by extensive knowledge in the areas of network perimeter security, and systems security, gained from multiple international projects. This allows us to offer technical solutions adapted to all situations of technical complexity, generating direct value for the customer who finds answers to all the needs that may arise in a single interlocutor design.

Our starting point is an on-site assessment, which results in an analysis of the specific needs of the client, thus establishing the foundation for a relationship of trust and collaboration.

Through a proactive methodology, we prevent infrastructure difficulties, going far beyond simply solving problems as they arise.

We design a customized roadmap with clear milestones and regularly test progress, ensuring that each step leads to tangible improvements. Our experienced and versatile staff is able to navigate and manage the complexities of globally distributed IT infrastructures, offering support and scalable solutions to companies of all sizes. The goal is to be not just suppliers, but true strategic partners, enabling our customers to achieve and maintain leadership in their industry supported by a secure and scalable infrastructure that supports their operations

### Future development benefits

The main advantages of the Competence Center Infrastructure are:

1. Guaranteed scalability of solutions according business needs.
2. Continuous innovation to stay abreast with the latest technologies.
3. Improved operational efficiency through optimization of infrastructure.
4. Enhanced security with advanced solutions of data protection.
5. Continuous support to ensure maximum infrastructure performance.

### Offer model

Our offer is based on a model project, with the possibility of extending the service to an ongoing management of the infrastructure as a managed service.

We propose customized solutions, with a focus on transparency of costs and the quality of the service provided.

## Meet the team: our expertise

Our team consists of experts in network engineering, IT infrastructure development, and systems engineering. These professionals bring years of experience in the design, migration and management of integrated systems and complex networks. This combination of certified expertise ensures a high standard of excellence.
